

 Reconstructiva Corporal" title="Cirug Reconstructiva Corporal" align="left" /></p> <p></p>
<p style="padding-left: 60px; text-align: justify;">Reconstrucci por Defectos Congitos o Adquiridos de Senos, Abdomen y Genitales</p> <p style="padding-left: 60px; text-align: justify;">
Qu es?</p> <p style="padding-left: 60px; text-align: justify;">Diversas patologs pueden afectar partes del cuerpo causando un defecto anatmico importante y una alteraci funcional. Como su nombre lo indica esta cirug trata de reconstruir, dar forma o mejorar el aspecto en los casos de defectos congitos o adquiridos.

El objetivo es devolver en lo posible la forma y la funcionalidad para que el paciente pueda llevar una vida mejor.

Cu es son los beneficios?</p> <p style="padding-left: 60px; text-align: justify;">Mejorar el aspecto y la funcionalidad de la parte afectada.</p> <p style="padding-left: 60px; text-align: justify;">Cu to tiempo dura esa cirug?</p> <p style="padding-left: 60px; text-align: justify;">Depende de cada caso.</p> <p style="padding-left: 60px; text-align: justify;">Qu dolor o molestias se presentan?</p> <p style="padding-left: 60px; text-align: justify;">Depende de cada caso.</p> <p style="padding-left: 60px; text-align: justify;">Cu es son los cuidados posteriores?</p> <p style="padding-left: 60px; text-align: justify;">Depende de cada caso.</p> <p style="padding-left: 60px; text-align: justify;">En qu consiste el procedimiento?</p> <p style="padding-left: 60px; text-align: justify;">La reconstrucci de senos se debe m frecuentemente a alteraciones causadas por extirpaci de cncer de seno y tmax, (poner link activo) o por alguna patolog que haya afectado esta parte anatmica. Las posibilidades de reconstrucci varn segn cada paciente y van desde utilizar tejido local, colocar una prtesis, hasta la utilizaci de tejido de la espalda o abdomen.

La reconstrucci de abdomen se debe m frecuentemente a cirug abdominales con resultados poco favorables, cicatrices de cirug previas programadas o de urgencia y resultado de infecciones severas. Se trata de reconstruir el contorno y la funci con varias tcnicas utilizando expansores de piel y/o reacomodando los tejidos existentes.

La reconstrucci de genitales se hace como tratamiento de secuelas de trauma o m frecuentemente por anomalidades congitas o de nacimiento. Pueden verse afectados lo genitales masculinos o femeninos. La reconstrucci siempre es compleja y varn dependiendo de la severidad y del sexo. Se utilizan varias tcnicas las cuales incluyen desde utilizaci de tejido local hasta trasplantes compuestos de tejido con microscopio.

</p> <h3 style="text-align: justify;">Reconstruction for Congenital or Acquired Faults of Breast, Abdomen, Masculine and Feminine Genitalia</h3><p> </p><div style="text-align: justify">Since sequels of diverse pathologies can affect different parts of the body causing an important anatomical defect and a functional alteration. The reconstruction of breast is more frequently due to alterations caused by extirpation (removal) of breast cancer and thorax, leaving the patient with a major defect. The possibilities of reconstruction vary according to every patient and go from using local tissue, placing a prothesis, up to the utilization of tissue from the back or abdomen.</div><div style="text-align: justify">
</div><div style="text-align: justify">The reconstruction of abdomen owes more frequently to abdominal surgeries with slightly favorable results, scars of previous programmed surgeries or of urgency and resulting in severe infections. It is a question of reconstructing the form and the function with several techniques using expansores of skin and / or re-accommodating the existing tissue.</div><p> </p><p> </p>

The reconstruction of the genitals is done as treatment of sequels of trauma or more frequently for congenital abnormalities or from birth. The male or female genitals can be affected. The reconstruction always is complex and changes depending on the severity and on the sex. Various techniques are used including the use of local tissue and even transplants composed of tissue with microscope.

Acute and Postburn

These cases require special attention since this burned skin in most cases causes severe deformities, hardens the tissue and limits the function of the committed site. It is possible to withdraw the burned skin re-accommodating the tissue, place better quality skin or use of skin expanders which are what they put in healthy adjacent skin to make it to grow and with the surplus, progressively replace the damage with healthy new skin. They need several surgical procederes and the results vary depending on each case.

Biopolymers (Inyectable Solutions) Sequels Treatment

The injection of strange materials like biopolymers, injectable solutions, oil, silicone liquid and other products for the corporal molding (buttocks, thighs, calves, etc) they can cause variable deformities in presentation and severity throughout the time. The are multiple therapies and each one with changeable results according to the severity of the damage and the characteristics of the patient.
